

MODEL

CODE

MIDLAND M ZERO**C1169**

The new generation of Midland CB line starts with a model completely re-designed with the very latest electronics developed in **SMD technology**, and with the new modern plastic case, much lighter than the usual metallic chassis of other CBs.

This is **M ZERO**, a **40 CHANNELS AM CB radio**, small size, especially dedicated to those who want the **max ease of use** from an essential radio but equipped with all main functions required by a CB.

The installation is much easier and faster, thanks to the supplied **cigarette lighter plug**.

The **UP/DOWN controls** allow the channel selection and the long pressure of one of these keys lets the channels scroll quickly.

Finally, M ZERO is also equipped with the CH-EMG control that is useful for the **immediate selection of the emergency channel** or of a **priority channel set by the user**.

A new CB transceiver, ideal for those who approach for the first time to the Midland's CB world.

COMPLYING TO CE/99/05

The package includes:

- M ZERO transceiver with 12V cigarette lighter plug
- 4pin microphone
