"Ingenious Products for Easier Communication."

Cobra Electronics Corporation 6500 West Cortland Street Chicago, IL 60707 USA www.cobraelec.com

Cobra Electronics Corp.© 1999

Our Thanks to You

A3

Thank you for purchasing the Cobra GR 25 LTD ST CB Radio. Properly used, this Cobra product will give you many years of reliable service.

SoundTracker™

"Cuts noise coming in...strengthens signals going out."

This patent-pending technology dramatically improves transmission and reception of CB signals.

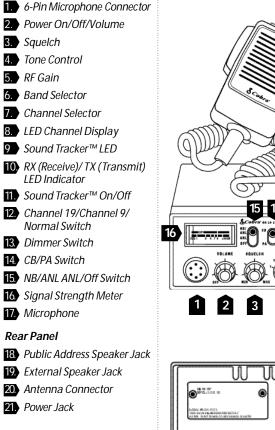

The revolutionary SoundTracker[™]System reconfigures the transmission signal, allowing it to be transferred more efficiently through cluttered airwaves.

At the same time, it significantly reduces the amount of static on all incoming CB signals.

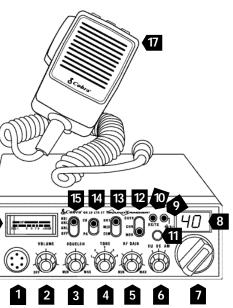

The end result is a cleaner, clearer reception of signals and a more powerful transmission, which dramatically improve CB communications.

Cobra on the World Wide Web: Frequently Asked Questions (FAQ) can be found on-line at: www.cobraelec.com

- 2.75-metre (9-foot) Microphone Cord

Installation

Location

Mounting and Connection

The transceiver is held in the

universal mounting bracket by

two thumbscrews which allow for adjustment at a convenient

The bracket includes two selftapping screws and star washers. The mounting must be mechanically strong and

conveniently located.

Note

angle.

)

Location

Plan location of transceiver and microphone bracket before starting the installation.

Select a location that is convenient for operation, yet does not interfere with the driver or passenger.

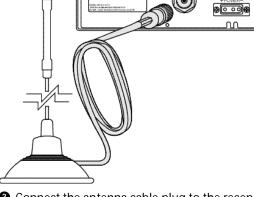

The transceiver is usually mounted to the underside of the dash with the microphone bracket beside it.

Mounting and Connection

Hold the radio with the mounting bracket in the exact desired location. If there is no interference, remove the bracket and use it as a template to mark the location for the mounting screws.

cb transceiver

2 Drill the holes and secure the bracket.

Connect the antenna cable plug to the receptacle marked "ANT" on the back of the unit.

continued

ហ

Installation

Installation

Note

Before installing the CB radio, visually check the vehicle's battery connection to determine which terminal, positive or negative, is earthed to the engine block (or chassis). A negatively earthed vehicle has its negative lead earthed to the chassis.

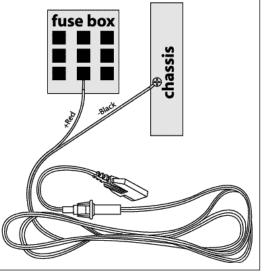

Note

)

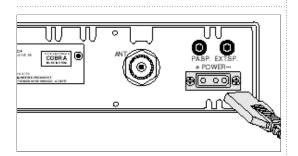

Connecting to a fuse circuit controlled by the ignition switch prevents the unit from being left on accidentally, and also permits operating the unit without running the engine.

Note

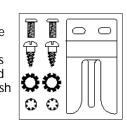

In positive earth vehicles the red wire goes to the chassis and the black wire is connected to the ignition switch.

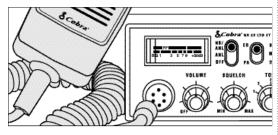

- In a negative earthed vehicle, connect the red lead of the DC power cord to an accessory 12 volt fuse.
- Connect the black lead to the negative side of the vehicle. This is usually the chassis. Any convenient location with a good electrical contact (remove paint) may be used.

- Plug power cable into back of unit marked "Power". Be sure to observe polarity markings.
- Mount the microphone bracket on the right side of the unit (nearer the driver) using two screws supplied. Bracket should be placed under the dash so that microphone is readily accessible.

Attach the 6-pin microphone cable to receptacle on front of unit and Install unit in bracket securely.

Installation

Antennas

CB Antenna

CB Antenna

The antenna is critical in affecting transmission distance. Only a properly matched antenna system will allow maximum power output. Cobra loaded type antenna models are highly recommended for most installations.

.....

+

boot.

Note

Note Antenna bracket must be earthed to the chassis of the vehicle.

For optimum performance in

passenger cars the ideal

antenna location is on the

centre of the roof. Second choice is on the centre of the

• A standard antenna connector is provided on the transceiver for easy connection.

Marine Installation

The transceiver will not operate at maximum efficiency in a boat without an earthing plate, (unless it has a steel hull). Before attempting installation, consult your dealer for information regarding an adequate earthing system and prevention of electrolysis between fittings in the hull and water. Ignition Noise Interference

(7)

Use of a mobile receiver at low signal levels is normally limited by the presence of electrical noise. The primary source of noise in cars is from the alternator and the ignition system. Typically, when signal level is adequate, the background noise does not present a serious problem. Also, when extremely low-level signals are being received, the transceiver may be operated with the vehicle's engine turned off. The unit requires very little current and therefore will not significantly discharge the vehicle's battery.

Even though the Cobra GR 25 LTD ST has an automatic noise limiter, in some installations ignition interference may be high enough to make good communications impossible. Many possibilities exist and variations between vehicles require different solutions. Consult your COBRA dealer or a 2-way radio technician for help in locating the source of a severe noise.

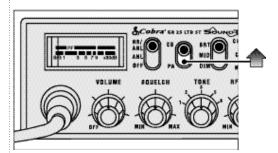

Operation

Turning On

 \rightarrow

Turning On

Make sure the power cord, antenna and microphone are connected to their proper connectors before starting.

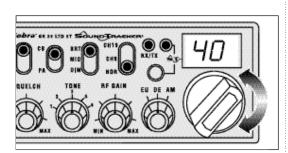

The CB/PA button should be in the CB position.

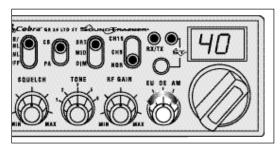

2 Rotate the On/Off Volume knob clockwise to a normal listening level.

Setting Channel Selector

• Select O one of forty channels and adjust volume. The selected channel is indicated by the LED readout directly above the channel selector knob

Setting Band Mode Selector

To operate in EU band, set control to EU, to operate in DE band, set to DE, and to operate in AM band, select AM.

Setting Channel Selector

Setting Band Mode Selector

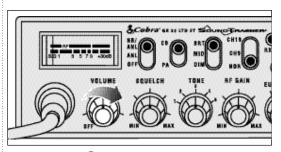

9

Operation

To Receive

To Receive

Selecting A Channel

 Rotate the OOn/Off Volume knob *clockwise*. The green RX/TX LED will be illuminated.

Selecting A Channel

Note

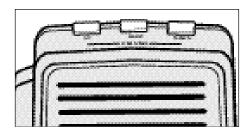

)

Switch to 9 or 19 (Information) for instant access to these channels.

• Switch to R NOR to select desired channel.

Selecting A Channel from Microphone

Channels can also be selected by pressing the UP and DOWN buttons on top of the microphone. To lock channel, press and release the LOCK button.

S-Meter

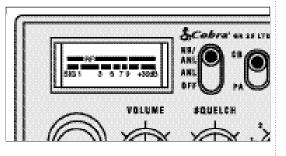

ter

Selecting a Channel from

Microphone

S-Meter

Swings proportionately to strength of incoming signal when receiving.

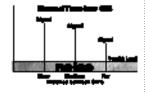

Sound-T-RACKER

Note

+

SoundTracker[™] gives you clearer, cleaner reception to improve CB communications while on the air.

(12)

The SoundTracker[™] System

While previous systems only "blanket out" or limit noise in higher sound frequencies, the revolutionary new SoundTracker™ System actually reduces noise while leaving the signal intact in the reception mode. In the transmission mode, it actually strengthens the signal, providing you with a significant reduction in noise on reception and transmission.

Sound clarity is measured by the ratio of the signal level to the noise level. The higher the signal-to-noise ratio, the better the sound.

How SoundTracker[™] Works

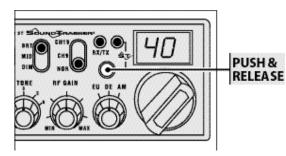

On Reception - "Cuts noise coming in"

With a normal CB, distant signals fall below the squelch level and are unintelligible. With a SoundTracker[™] CB, the noise level is cut by up to 90%, which increases the signal-to-noise ratio and dramatically improves signal clarity. This also allows you to reduce the squelch level significantly , which greatly expands your listening range.

On Transmission - "Strengthens signals going out"

A SoundTracker[™] CB strengthens the transmit signal by more effectively using the available RF power output of the CB. The result is improved transmission signal clarity and an expanded transmission range.

Activating SoundTracker[™]

• Push and release the O ST button. Red LED is illuminated when SoundTracker[™] is turned on.

Operation

Activating SoundTracker[™]

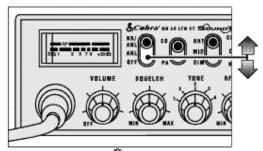

NB/ANL, ANL, OFF (Noise Blanker, Automatic Noise Limiter Switch

Note

+

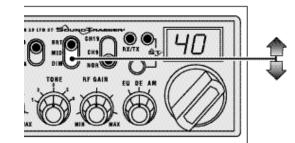

The RF noise blanker is very effective in reducing repetitive noises such as ignition interference.

NB/ANL, ANL, Off Switch

- When switched to NB/ANL position the RF Noise Blanker and Automatic Noise Limiter is activated, providing increased noise filtration.
- When switched to the ANL the Automatic Noise Limiter is activated. This helps reduce noise created by the vehicle's electronics.

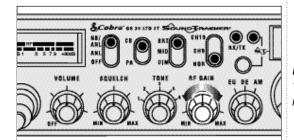

When switched to OFF position Noise Blanking and Automatic Noise Limiting Filtration will be turned off. Bright/Mid/Dim Switch

Switch to BRT, MID or DIM to control brightness of the channel indicator and multi-function meter for day or nighttime driving.

RF Gain Control

The RF Gain is used to optimize reception in strong or weak signal areas.

• Rotate the RF Gain knob anticlockwise to reduce gain in strong signal areas. In weak signal areas turn *clockwise* to increase gain.

Operation

Bright/Mid/Dim Switch

RF Gain Control

Note

15

The RF Gain is used to optimize reception in weak signal areas.

14

Setting Squelch

Squelch is the "control gate" for incoming signals.

VOLUME

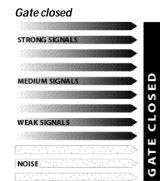

Cobra' en 15 ITA ST

SQUELCH

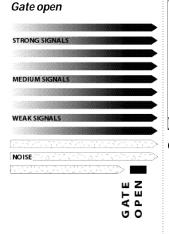

• Full clockwise rotation closes the "gate"

allowing only very strong signals to enter.

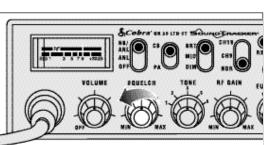

Setting Squelch

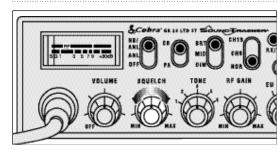

)

16

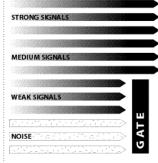

Full anticlockwise rotation opens the "gate" allowing all signals in.

To achieve the Desired Squelch Setting (DSS), turn the Squelch control anticlockwise until you hear noise. Now turn the control clockwise until the noise just stops. This is the DSS setting.

Gate set to Desired Squelch Setting (DSS)

17

Operation

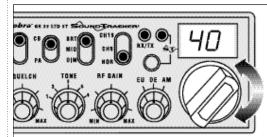

18

Operation

To Transmit

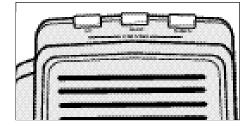

Be sure the antenna is properly connected to the radio before transmitting. Prolonged transmitting without an antenna,or with a poorly matched antenna, can cause damage to the transmitter. To Transmit

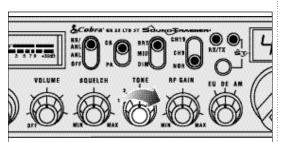

• Select desired Channel.

Selecting A Channel from Microphone

Channels can also be selected by pressing the UP and DOWN buttons on top of the microphone. To lock channel, press and release the LOCK button.

Setting Tone Control

• Tone Control () is used to set the desirable tone level of received audio signals.

Operation

Setting Tone Control

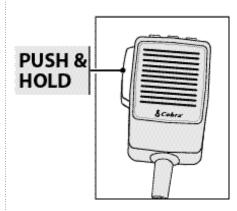

19

Selecting a Channel from Microphone

Transmit

)

Transmit

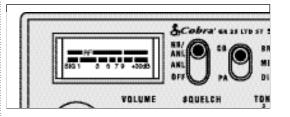

• Push and hold microphone button to transmit. Transmitter is now activated. When transmitting, hold the microphone two inches from your mouth and speak in a clear, normal voice. *Release* to receive.

RF Meter

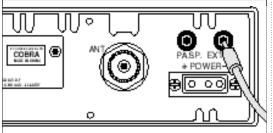

This meter swings proportionately to the RF output (outgoing signal) while transmitting.

RF Meter

External Speaker

The external Speaker jack is used for remote receiver monitoring.

• Connect an external speaker to the external speaker jack on the rear panel.

Operation

External Speaker

Note

The external speaker should have 8-ohm impedance and be rated to handle at least 4 watts. When the external speaker is plugged in,the internal speaker is automatically disconnected.

Note

Cobra external speakers are rated at 10 watts.

21

PA (Public Address)

Note

Speaker should have 8-ohm impedance and be rated to handle at least 4 watts.

Note

 \rightarrow

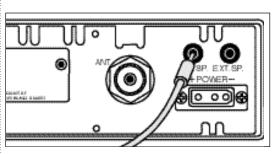

The speaker should be directed away from the microphone to prevent acoustic feedback.

Note

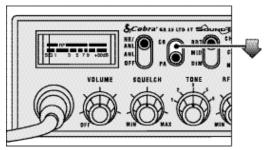

Adjust volume control to normal listening level. Activity on the CB channel will be heard through the PA speaker.

22

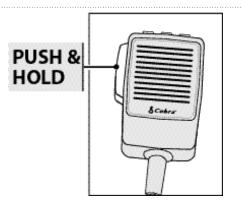

PA (Public Address)

• Connect an external PA speaker to the PA jack on the rear panel.

2 Set CB/PA switch to PA position.

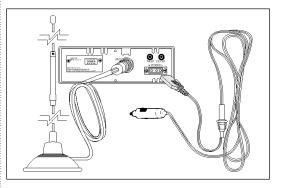

Push and hold microphone button and speak in a normal voice. Your voice will sound on the PA speaker.

Temporary Mobile Set-Up

Temporary Mobile Set-Up

Temporary Mobile Operation

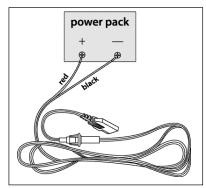

For temporary mobile operation you may want to purchase an optional cigarette lighter adapter from your COBRA dealer. This adapter and a magnetic mount antenna allow you to "install" your transceiver guickly for temporary use.

Home And Office Set-Up

Base Station Operation (From 220/240V AC Domestic Current)

To operate your transceiver from home or office you will need a 13.8 volt DC Power Pack rated at a minimum of 2 amps, and a properly installed base station antenna.

 Connect the red (+) and black (-) leads of the transceiver to the corresponding terminals of the power pack.

COURTA O ANTON OF OR ANTON OF A COURTA O ANTON

- Plug power cable into back of unit marked "Power". Be sure to observe polarity markings.
- Connect properly installed and matched base station antenna.

Base Station Operation (From 220/240V AC Domestic Current)

Do not attempt to operate this transceiver by connecting it directly to 220/240 V AC.

CB 10-Codes

CB 10-Codes

Citizen Bands have adopted the "10-CODES" for standard questions and answers. These codes provide quick and easy communication, especially in noisy areas. Following are some of the more common codes and meanings:

Code Meanir

Code	Meaning
10-1	Receiving poorly
10-2	Receiving well
10-3	Stop transmitting
10-4	OK,message received
10-5	Relay message
10-6	Busy, stand by
10-7	Out of service, leaving air
10-8	In service, subject to call
10-9	Repeat message
10-10	Transmission completed, standing by
10-11	Talking too rapidly
10-12	Visitors present
10-13	Advise weather/road conditions
10-16	Make pick-up at
10-17	- 3
10-18	Anything for us?
10-19	Return to base
10-20	My location is
10-21	Call by phone
10-22	Report in person to
10-23	Stand by
10-24	Completed last assignment
10-25	Can you contact
10-26	5
10-27	Moving to channel
10-28	Identify your station
